DESCRIPTION

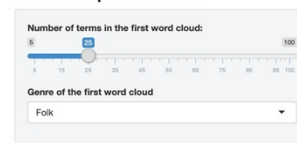

Most of us listen to hundreds of songs and it's really a good way for us to relax and explore more fun of life. However, did we really learn what we have listened to? What message do we have got from these songs? Based on these questions, I did a brief analysis.

WORDS CLOUD

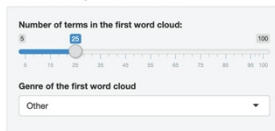

Most frequent words

As we can see from the words cloud, Love, baby, time is the highest frequency word among all genres of songs. That's mean, more songs focus on expressing the feeling of love. The eternal meaning for human is always love. It seems like the trend of song focus on the topic of love. People are confused, excited and bonded by love. Love can give people different feelings like happiness, sadness, excitement, sorrow, etc. That's why people like to makes songs to express these feeling and the audience can also feel what they desire to express. I think in the future, love will still be the main spotlight in the song.

Numbers of songs

From the chart, we can clearly say the rock music has been the main stream since 1970s to now. There is little more variety occurred on 1990s but achieve peak on 2000s. At the same time, the total number of songs had dramatically increased. One possible reason is the development of technology. Previously, tape is the main equipment to play music. With the invention of CD , MP3 Players and other recording equipment, lots of songs have been created. In 2010s. the total numbers of songs have decreased but remain the equally weighted of various types.
